## QUICK TIPS FOR CHOOSING A WOUND DRESSING

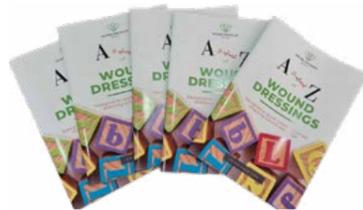

by Dr Michelle Gibb

Dressing selection can be overwhelming and it's no wonder with thousands of different dressings available. With such a wide variety of products to choose from, it's important that you know the types of dressings available, when and when not to use them, and how to use them effectively.

Fortunately, like medications, dressings typically fall into generic categories or classes. Understanding the generic category of the product, their actions, indications, contraindications, advantages and disadvantages for use, will help with decision making.

When evaluating the performance of your dressings, ask yourself these questions:

- Does the dressing stay intact and remain in place for an extended wear time?
- Prevent leakage between dressing changes?
- Does it provide a moist wound healing environment?
- Protect the periwound skin?
- Reduce wound-associated pain?
- Reduce or control wound odour?
- Does the person with the wound find the dressing conformable and comfortable?
- Is the dressing easy to apply and remove without causing trauma to the wound or periwound skin?
- Are the dressings cost-effective (remembering that cheap isn't always cost-effective)?
- Supported by evidence and resources?

Item #: 1504754 Each  
**\$30** ex GST

If you're still not sure what dressings to select, then you might want to check out the **A to almost Z of Wound Dressings**. It contains information on the most common types of dressing products available with useful hints and tips to guide dressing selection. Order today!

# BACK TO BASICS WOUND CARE WORKSHOP

presented by Dr Michelle Gibb

**SYDNEY**

Canada Bay Club  
FRIDAY 19 JULY 2024

**SEATS STILL  
AVAILABLE!**

Focusing on the basics of wound care we will be discussing treatment options for different types of common wounds, how to best address challenges in wound care, and working through ten case studies. The workshop also includes a 90-minute practical session.

## A Fundamental Guide to Reprocessing Medical and Other Devices

THURSDAY 11 JULY 2024  
1PM - 2PM AEST

**REGISTER NOW!**

presented by **Whiteley Medical**

# LATEST TRENDS IN STERILISATION

The first mentions of sterilisation in history began in ancient Egypt when pitch and tar were used as antiseptics. Centuries later inventors used sulphur fumes to clean infectious material from objects. Steam was first recorded in cleansing items in 1679 by Deni Papin using a pressure cooker, a device he called a steam digester. The concept of sterilisation grew in importance in the 1860s when famous French microbiologist and chemist Luis Pasteur wrote about the connection between germs and disease. Soon after in 1879, one of Pasteur's first associates Charles Chamberland designed and built the first Autoclave.

While today's sterilisers still operate on the same principles, medical-grade sterilisers, called autoclaves, can sterilise items much more efficiently, effectively, and predictably in controlled environments. Autoclaves adhere to quality assurance guidelines and must guarantee that instruments are correctly sterilised before reuse. Standards Australia updated its standards for reprocessing reusable medical devices in health related facilities in 2023.

### Australian Standards for Reprocessing

AS 5369:2023 sets out guidelines and best practices to ensure the effective and safe management of reusable medical devices and other healthcare-related items throughout their lifecycle, from reprocessing to how it is moved, stored and handled.

AS 5369:2023 superseded AS/NZS 4187:2014 with a raft of changes. These updates included more detailed information on steam penetration resistance to help define product classifications. The Spaulding classification identifies items as non-critical, semi-critical or critical, so they can be assigned to a product family and cleaned accordingly.

Regular testing of water quality is required as some water might need to be treated before use and new washing and sterilisation equipment must be compliant with ISO 15883, EN 285 or EN 13060 and be installed according to Performance Qualifications (PQ), Installation Qualifications (IQ), and Operational Qualifications (OQ).

Australian Standard 5369:2023 also defines the space, layout and design of sterilisation rooms in medical facilities. This involves physically separating each reprocessing area and their equipment which could require facilities to designate more space for sterilisation procedures. A unidirectional airflow and workflow greatly reduce the risk of cross-contamination.

### Latest Trends in Instrument Reprocessing

There are four key areas identified by steriliser manufacturers that are important this year:

**Digitalization:** The demand for full-colour intuitive smart touch displays and efficient documentation sharing via USB or networks is increasing as autoclave manufacturers improve their digital offerings. Newer features include integrated software for documentation approval, labelling traceability, and ease of inbuilt label printing.

**Sustainability:** Sterilisers are inherently better for the environment than traditional cleaning methods due to the efficient use of water under pressure. Autoclaves that offer reduced cleaning and drying cycle times use less power and water which is more environmentally friendly. In some cases, autoclaves can be recycled as a whole or working parts can be transferred to other machines to keep them operational.

**Experts Shortage:** The healthcare industry needs more staff, and the sterilisation sector is no exception. The shortage of skilled technicians and lack of standardised training programs is a constant problem for sterilisation businesses of all sizes.

**Inflation and Increases in Pricing:** Post-pandemic manufacturing has become more expensive as refining raw materials, staff wages and increased transportation costs flow down to the end consumer.

### Autoclave Melag Pro-Line S

The reliable Pro Line Class S autoclaves offer an even more cost-effective alternative for practices and clinics that do not require a Class B autoclave due to the instruments used. Discover the ground-breaking advantages of Class S autoclaves.

- Class S vacuum procedure for reliable sterilization of simple hollow body instruments
- High loading capacities Sterilization of up to 5 kg on 5 trays in only 13 to 25 minutes
- Intuitive operating concept due to the Smart-Touch Display with LED status
- Connectivity and data logging of the sterilisation protocols via USB stick or network
- Stand-alone device concept With integrated water tanks for maximum flexibility
- Energy saving mode Power Save for top energy efficiency in daily practice
- Quality made in Germany developed, designed and produced in Berlin

### Welch Allyn ThermoScan PRO6000 w/ Small Cradle

The Welch Allyn Braun ThermoScan PRO 6000 ear thermometer featuring advanced measurement technology, has the speed and simplicity you need to capture accurate and reliable temperature readings in a comfortable way for patients. The Braun PRO 6000 advantage lies in our innovative PerfectTemp technology, which overcomes the potential for low readings compared to core, by adjusting for factors that impact measurement accuracy. The sleek design is easy to disinfect and upgraded security features help protect and maximize your investment. Memory recall button and 60-second pulse timer are added features to support staff efficiency and help improve workflow.

- Innovative PerfectTemp™ technology adjusts for variability in probe placement
- ExactTemp™ technology detects stability of the probe during measurement
- Designed to take quick and accurate readings, to improve patient satisfaction
- 60 second pulse timer assists with manual measurement of pulse rate, respiration
- Electronic security features help prevent theft, loss
- Small cradle for probe cover storage that pop-up for easy attachment
- 3 Year Warranty

### Walmay Cryospray WM227 Liquid Nitrogen Unit w/ 5 Tips & Case

The Walmay Cryospray uses liquid nitrogen to treat various medical conditions, particularly in dermatology and some surgical procedures. The extreme cold causes localized damage or the destruction of tissue, the treated tissue will slough off or be absorbed by the body's natural healing processes.

The Cryospray WM227 is commonly used by dermatologists to treat various skin conditions, including the removal of warts, skin tags, actinic keratoses, and some types of skin cancers. The Walmay Cryospray is also used in specific gastroenterology, ophthalmology and gynaecological procedures and for pain management to numb the skin before minor surgical procedures. Cryosurgery is considered a minimally invasive technique and is often preferred for its precision and minimal scarring.
